1. Welcome: what is Misal Hub OS?

Misal Hub OS is the one system that runs your restaurant. Instead of paper bills, WhatsApp orders, stock registers and Excel sheets, everything happens in one place and every number is connected.

- **Billing (POS):** take dine-in, takeaway, delivery and bulk orders, print GST bills and kitchen tickets.
- **Kitchen screen:** new orders appear on the kitchen screen by themselves.
- **Online and QR ordering:** customers order from their phone; you accept with one tap.
- **Stock:** ingredients go down automatically when you sell, and you see what is running out.
- **Customers:** every phone number is saved; send offers on WhatsApp; give loyalty points.
- **Reports and money:** sales, GST, profit, cash drawer, expenses, salaries.
- **Franchise:** compare outlets, calculate royalty, track people who want a franchise.
- **Insights:** daily tips such as how much to prepare tomorrow.

Who is this guide for?

Everyone. Read Section 2 and Section 3 first. Then read only the sections for the work *you* do (for example, a cashier reads Section 4, a cook reads Section 5).

> **TIP**
> You do not need to remember everything. The screens are simple: big buttons, clear names. When in doubt, look in the Quick Answers section at the end.

2. Opening the system and signing in

How to open it

1. Open the web address given to you on a tablet, phone or computer (for example in Chrome).
2. To keep it like an app: in Chrome choose **Add to Home screen** / **Install app**.
3. You will see the Misal Hub OS sign-in page.

Two ways to sign in

Who	How they sign in
Cashier, waiter, kitchen, delivery rider	Mobile number + 4 to 6 digit **PIN**. Tap the PIN on the on-screen number pad.
Owner, head-office admin, manager, franchisee	Mobile number + **Password**. Tap the 'Password' tab first.

After you sign in, you land on your own home screen: the cashier on the POS, the kitchen on the Kitchen screen, the rider on Delivery, and owners and managers on the Dashboard.

Safety rules

- If you type the wrong PIN or password **5 times**, that mobile number is blocked for 5 minutes. Wait, then try again.
- You stay signed in for **12 hours** (one shift). After that you sign in again.
- Never share your PIN or password. Everything you do is saved with your name.
- Always tap the **sign-out** icon (bottom left) when you finish on a shared device.

Using it on a phone

- The app fits any phone screen. At the bottom you get big buttons for your main screens (Dashboard, POS, Orders, Kitchen) and **More** for everything else.
- Lists such as Orders, Menu, Customers, Stock and Expenses become easy cards, with the total, status and buttons visible without sideways scrolling.
- To keep it like an app: Android Chrome → menu → **Install app**. iPhone Safari → Share → **Add to Home Screen**.

Clock in and clock out

At the bottom left of the menu, staff see a **Clock in** button. Tap it when your shift starts and **Clock out** when it ends. This builds the attendance sheet and salary calculation automatically.

3. Who can see what (roles)

Every person gets a role. The role decides which menu items are visible. This keeps money and settings safe.

Role	What they can use
Owner / Head-office admin	Everything, for all outlets. Only they can change the master menu, outlet settings, franchise terms and see the audit log.
Franchisee	Their own outlet: POS, orders, kitchen, menu prices, stock, customers, reports, staff, expenses, insights.
Manager	Their own outlet: same as above except Insights. Can give big discounts, cancel after kitchen, refund, correct stock.
Cashier	POS, Orders, Customers, Cash register, Delivery.
Waiter	POS and Orders only.
Kitchen	Kitchen screen and Inventory (to record wastage and batches).
Delivery rider	Only their own assigned deliveries.

If you open a page you are not allowed to use, the system simply takes you back to your home screen.

Owners with more than one outlet

At the top of the left menu there is an **Outlet** box. Choose the outlet you want to look at. Every screen then shows that outlet only. Reports also have an **All outlets** button.

4. Daily routine (the easy checklist)

Morning (before opening)

1. Sign in and tap **Clock in**.
2. Cashier: go to **Cash register** and **Open shift**. Count the cash in the drawer and type it as the opening float.
3. Manager: open **Insights** to see the **Morning prep planner**: it tells you how many portions to expect and how much matki, onion, pav and masala you need.
4. Check **Inventory** or the Dashboard for low-stock items. Order what is short.
5. Mark anything that is finished as **Sold out** in the Menu page (Section 8).
6. Record today's fresh masala or other batches in **Inventory** → **+ Batch** (Section 10).

During the day

- Bill every order in **POS**. Send the order to the kitchen with **KOT**.
- Watch for the yellow **incoming online order** banner. Accept or reject quickly.
- Kitchen keeps its screen open and taps each order as it is cooked.
- Record any cash you take out of the drawer under **Expenses** (mode: Cash).

Evening (closing)

1. Make sure every table is paid and closed. Cancel any order that was never served (with a reason).
2. Cashier: **Cash register** → **Close shift**. Count the cash and type it. The system tells you if it is **over** or **short**.
3. Print the **Day-end report (Z)** from the same page.
4. Add the day's purchases in **Inventory** → **Purchases** and expenses in **Expenses**.
5. Manager or owner: look at the Dashboard and Reports for the day. Tap **Clock out** and sign out.

5. POS: taking orders and billing

The POS is the main working screen for cashiers and waiters. It has three parts: **categories** on the left, **menu items** in the middle, and the **current order** on the right. On a phone, the order opens when you tap the orange basket button.

A. Take a dine-in order (with table)

1. At the top, make sure **Dine-in** is selected.
2. Tap **Select table**. Free tables say 'Free'. Yellow tables already have an order. Tap a free table.
3. Tap items to add them. If an item has options (for example Misal Pav), a small window opens: choose **Spice level** (Mild / Medium / Spicy / Extra spicy), **Regular or Jain**, any **Add-ons** (extra pav, farsan, cheese…) and a special instruction, then tap **Add**.
4. Use **+** and **−** to change quantity. You can type a short note under each item (for example 'less tari').
5. Optional: tap **Customer** and enter name and phone (see part F).
6. Tap **KOT**. The order goes to the kitchen screen and a KOT number is shown.
7. Later, when the guest wants the bill, tap **Pay** (see part G).

> **TIP**
> Guests often order more later. Open the same table again, add new items and tap KOT again. The kitchen gets only the new items.

B. Takeaway order

Select **Takeaway**, add items, add customer name and phone if you have it, then **KOT** and **Pay**. No table is needed.

C. Delivery order

1. Select **Delivery** and add the items.
2. In the order panel type the **delivery address** (required).
3. Choose the distance button: **≤ 1 km** (default ₹50) or **1–5 km** (default ₹80). The delivery charge is added to the bill.
4. Tap **KOT**. The order stays open until it is delivered. You can take payment now (online/UPI) or let the rider collect cash (see Section 7).

D. Bulk / party orders

Select **Bulk**. It works like a delivery or takeaway order. Use the order note to write the date, time and special requests.

E. Hold, KOT, Discount and the other buttons

Button	What it does
Hold	Saves the order without sending it to the kitchen. Use when the guest is still deciding.
KOT	Sends new items to the kitchen. After this the items are locked ('Sent to kitchen').
Pay	Sends any new items to the kitchen first, then opens the payment window.
Discount	Manual % or ₹ discount, coupon code, or loyalty points (see below).
KOT (printer icon)	Prints the kitchen ticket again.

Button	What it does
Bill	Shows or prints the customer bill.
Cancel order	Cancels the whole order. A reason is required.
Mark all served	Tells the system every item reached the table.
New (top right)	Clears the screen to start a fresh order.

Discounts, coupons and loyalty points

- **Manual discount:** choose % or ₹ and type a value and a reason. **Cashiers can give up to 10% or ₹50.** Higher discounts need a manager to do it.
- **Coupon:** type the code (for example WELCOME10) and tap Check. The system tells you the saving or why it does not work (minimum bill, expired, used up).
- **Loyalty points:** only works when a customer is attached. 1 point = ₹1. Tap Max to use all points.
- The bill total is always rounded to the nearest rupee.

F. Adding a customer

Tap **Customer**. Search by phone or name. If the person is new, type the name and 10-digit phone number and tap **Use these details**. The customer is saved in your customer list automatically and starts earning loyalty points (5% of the bill by default). This list is what you use later for WhatsApp offers.

G. Taking payment

1. Tap **Pay**. The amount due is shown on top.
2. Choose the mode: **Cash, UPI, Card, Online (already paid), Wallet** or **Credit / due**.
3. For cash, tap a quick amount (Exact, ₹500, ₹1000…) or type what the guest gave. The system shows the **change to return**.
4. For **split payment** (part cash, part UPI), tap **Split — add** and set an amount for each mode.
5. For UPI, a QR code is shown if the outlet's UPI ID is set in Settings. Let the guest scan it and **confirm the money in your UPI app** before you tap the button.
6. Tap **Complete payment**. The bill opens; tap **Print**. Dine-in and takeaway orders close and the table becomes free.

> **IMPORTANT**
> The system does not check your bank. It only records what you type. Always confirm UPI and card payments on your own payment app.

H. Mistakes and cancellations

- **Wrong item before KOT:** tap the − button to remove it.
- **Wrong item after KOT:** tap **cancel** next to the item and give a reason. Only a **manager** can cancel after the kitchen has the order.
- **Whole order: Cancel order** with a reason. If money was already taken, a manager must **Refund** it first from the Orders page.

- Every cancellation and refund is saved in the audit log with the person's name.

What the bill shows

Outlet name, address, phone, GSTIN and FSSAI number, bill number, date and time, table or customer, each item with quantity and price, discount, CGST and SGST split, round-off, total, how it was paid, and your footer message. Menu prices already include GST (you can change this in Settings).

Printing

Tap **Print** and pick your thermal printer (80 mm paper). If the print preview looks small or has margins, set **Margins: None** and **Scale: 100%** in the print window. Direct printer-button support is not included in this version.

6. Kitchen screen

Put a tablet or screen in the kitchen and keep the **Kitchen** page open. New orders appear by themselves with a short beep. No paper needed.

What each ticket shows

- Order number and table (or customer name for takeaway and delivery).
- How many minutes ago the order came. The ticket turns **yellow** when it reaches the item's normal cooking time and **red** when it is more than 3 minutes late.
- Items with quantity, spice level, Jain/Regular, add-ons, notes and the order note.
- A small purple tag if it came from the website, QR or WhatsApp.

How to use it

1. Tap **Start cooking** when you begin the order.
2. Tap the small box beside each item: once = cooking, again = ready.
3. When everything is ready tap **All ready**. The waiter or cashier sees it.
4. Tap **Bump** when it has gone out. The ticket disappears from the screen.

At the top you can show **All** items, only **Main** kitchen items, or only **Beverages** (tea, sarbat, chaas). The speaker button turns the beep on or off.

> **TIP**
> Chrome sometimes blocks sound until you tap the page once. Tap anywhere on the Kitchen screen after opening it.

7. Orders, online orders and delivery

The Orders page

Every order of the day is listed here with time, type, customer, status and payment. Use the filters for another date, status, type, or search by order number, name or phone. Tap an order number to open full details: items, payments, the bill, and buttons to **Open in POS**, **Print bill** and (for managers) **Refund**.

Status	Meaning
new	Order placed; kitchen not started.
preparing	Kitchen is cooking.
ready	Cooked and waiting to be served or picked up.
served	Given to the guest (payment may still be pending).
out for delivery	A rider has taken it.
completed	Done and fully paid.
cancelled	Cancelled or refunded.

Online orders (website, QR table, WhatsApp)

Customers can order from their phone at **/order/MRD** (pickup or delivery). A QR code on each table opens the same page for that table. These orders are **not** sent to the kitchen automatically: you decide first.

1. A yellow banner appears on the Dashboard and the top of the Orders page: **'incoming online orders waiting'**.
2. Read the items, address and note.
3. Tap **Accept** to send it to the kitchen, or **Reject** if you cannot make it.
4. To take payment later, open the order and tap **Open in POS** then **Pay**.

> **TIP**
> The page refreshes by itself every few seconds. Keep the Orders or Dashboard page open on the counter tablet so you never miss an online order.

The customer always sees the correct price: prices are calculated by the system, not by the phone. After ordering they see an order number and a UPI QR (if UPI is set) or a message to pay at the counter or to the delivery person.

Delivery page

1. Manager or cashier opens **Delivery** and sees every open delivery with address, phone, items and amount.
2. Choose a rider in **Assign rider…**. The order becomes 'out for delivery'.
3. The rider signs in with their own PIN and sees only their deliveries, with **Map**, **Call** and **WhatsApp** buttons.

4 At the door: if money is due, the rider taps **Cash collected** or **UPI collected**. If already paid, tap **Mark delivered**. The order completes.

8. Menu management

Open **Menu** to see all items with price, food-cost percentage, GST and availability.

Mark an item Sold out (everyone with Menu access)

Tap the green **Available** badge next to the item. It turns red **Sold out** and disappears from the POS and the customer ordering page for your outlet. Tap again to bring it back.

Different price at your outlet

Tap the price. Type a local price for your outlet only, or clear it to follow the master price. A small 'local' tag shows that a custom price is used.

Master menu (owner and head office only)

- **Add item:** name, description, category, price, GST %, preparation time, kitchen station (main or beverages), Veg, Bestseller, Jain option, Spice levels, Active.
- **Edit item:** tap the pencil. Untick Active to hide an item everywhere without deleting it.
- **Add category** for a new group of items.
- **Modifier groups:** in the **Modifiers & add-ons** tab you can add choices such as spice levels or extra pav with their prices. Then tick the groups on each item so they show in the POS.

Food cost %

This column shows how much of the selling price (before GST) goes to ingredients. It needs a recipe (Section 10). **Green** is healthy (up to about 32%), **orange** is watch-out, **red** (over 40%) means the item earns very little.

> **IMPORTANT**
> Only head office can change the master menu. Managers and franchisees can only mark sold-out and set their local price.

9. Customers, loyalty and marketing

Customer list

Open **Customers**. Every guest who gave a phone number at billing is added automatically. You see visits, total spend, last visit and points. Use the search box or the colour filters:

Group	Who is in it
VIP	Visited 8+ times (or spent ₹3,000+) and came in the last 30 days.
Regular	Comes now and then and is active.

Group	Who is in it
New	1 or 2 visits so far.
At risk	Used to come (3+ visits) but not seen for 30+ days.
Lost	Not seen for 60+ days.

Tap a customer to see order history, favourite items, address and the **loyalty ledger**. Buttons: **Call** and **WhatsApp**. Managers can **Adjust** points (with a reason). **Add customer** lets you enter someone manually, including a birthday.

Loyalty points

- Customers earn **5%** of every paid bill as points (changeable in Settings).
- 1 point = ₹1 discount. Use them in the POS under Discount.
- Points are added only when the bill is fully paid.

WhatsApp campaigns (Marketing)

1. Open **Marketing** → **WhatsApp campaigns**.
2. Pick a ready message: Win-back (at risk), We miss you (lost), VIP thank-you, Welcome new customers, Birthday wish, New menu announcement.
3. Edit the message if you like. **{name}** is replaced by each customer's first name.
4. In the list, tap **WhatsApp** next to a person. WhatsApp opens with the message ready. **You press send.** The button turns to 'Sent' so you know where you stopped.

Only customers who agreed to messages are listed. Birthdays shows people with a birthday in the next 8 days. **Tip:** do the 'At risk' campaign every week; it takes about two minutes.

Coupons

In **Marketing** → **Coupons** tap **New coupon**. Set a code, percent or flat amount, minimum bill, maximum discount, last date and how many times it can be used. Tap the green/grey badge to pause or start a coupon. Two coupons are ready: **WELCOME10** (10% up to ₹50 on bills above ₹150) and **MISAL20** (₹20 off above ₹200).

Feedback

Marketing → **Feedback** shows the average rating, food and service scores, a rating chart and recent comments. Guests leave feedback on a simple page; each completed order can be reviewed once. Reply quickly to low scores.

10. Inventory (stock)

Open **Inventory**. The top boxes show total stock value, how many ingredients you track, and how many are low or out.

How stock goes down by itself

Each menu item has a **recipe** (for example 1 Misal Pav = 60 g matki + 40 g onion + 2 pav…). When you send a KOT, the system subtracts those ingredients. You do not type anything. The more items have a recipe, the more accurate your stock and food cost are.

Stock tab

- Each row shows **on hand**, **minimum**, average cost and status: **OK**, **Low** (at or below minimum) or **Out**.
- Managers can change the minimum by typing in that box. Set it to the quantity at which you want to reorder.
- **+ Batch:** add stock you produced, such as today's ground masala. Add a note.
- **Waste:** record spoiled or spilled stock. A reason is required, so you can see the cost of waste.
- **Count** (managers): after counting physically, type the real quantity; the system corrects the difference.

Purchases tab (managers)

1. Choose the supplier, invoice number and date.
2. Add a line for each ingredient: quantity and price per unit (the last cost is filled in for you).
3. Type how much you paid now (or tap **Full**). Anything unpaid shows as **Due** in the list.
4. Tap **Save purchase**. Stock goes up and the **average cost** of each ingredient updates by itself.

On the right you can add a **new supplier** or a **new ingredient** (with unit, cost, minimum and opening stock).

Recipes tab (managers and head office)

Pick a menu item, add each ingredient with the quantity used for **one portion**, and save. You immediately see the **cost per portion**. Do this for every item to unlock correct food-cost reports.

Movement log

Lists every purchase, wastage, batch and correction with date, quantity and note. Use it to find where stock went.

11. Cash register and day-end

The cash register compares the cash that *should* be in the drawer with the cash that *is* in the drawer, so mistakes and theft are noticed the same day.

Open and close a shift

1. Start of day: **Cash register** → **Open shift**. Count the cash in the drawer and type it (the float).
2. During the day the page shows **Expected in drawer** = float + cash received − cash expenses.
3. End of shift: tap **Close shift & count cash**. Count the real cash and type it.
4. The system tells you **Balanced**, **Over** or **Short** and saves it in the shift history.

UPI and card payments are not part of the cash count; only cash is.

Day-end report (Z report)

On the same page, the day-end report shows orders, sales, GST, discounts, delivery charges, cancellations and money collected by cash, UPI and card. Choose any date and tap **Print** to get a receipt-size copy.

12. Expenses

Open **Expenses** to record money going out: raw material, rent, salary, electricity, gas, packaging, marketing, maintenance, delivery, misc.

1. Choose the category, type the amount, choose how you paid (cash, UPI, bank, card), the date and a short note (vendor, bill number).
2. Tap **Add**.

- **Cash** expenses reduce the 'expected cash' in the open shift, so record them the moment you take the money.
- Choose a date range to see totals, daily average and the biggest category.
- Managers can delete a wrong entry. The deletion is saved in the audit log.

13. Staff, attendance and salary

Add or edit staff

1. Open **Staff** → **Team** → **Add staff**.
2. Type the full name and **mobile number** (this is their login ID) and choose the role.
3. Set a **PIN** (4 to 6 digits). Managers also need a **password** of at least 8 characters.
4. Enter the monthly salary and tap **Save**.

- A **manager** can add cashier, waiter, kitchen and delivery staff for their outlet. Only head office can add managers or franchisees.
- To reset a forgotten PIN or password, tap the pencil and type a new one.

- When someone leaves, untick **Active**. They can no longer sign in but their past records stay.

Attendance

Staff → Attendance shows who is in today and the time they clocked in. Below is the month grid. Tap a day to change it: **P** present → **½** half-day → **L** leave → **A** absent. Staff who tapped Clock in are marked present automatically.

Payroll

Staff → Payroll shows each person's monthly salary, paid days and the amount payable: **salary × paid days ÷ days in the month**. Present and leave count as a full day, half-day counts as 0.5. After paying, record it in Expenses under 'Salary'.

14. Reports

Open **Reports**. At the top choose a period: Today, Yesterday, Last 7 days, Last 30 days, This month, or pick your own dates. Owners can switch between **This outlet** and **All outlets**. The **CSV** button downloads the data for Excel or your accountant.

Tab	What you learn
Sales	Total sales, orders, average bill and discounts compared with the previous period; daily sales line; sales by hour; a heat map of the busiest weekdays and hours; split by order type, channel and payment mode; a day-by-day table.
Items & margin	Every item sold with quantity, revenue, estimated ingredient cost and margin, plus sales by category.
GST & payments	GST by rate (CGST and SGST), taxable value, payments by mode, discounts, cancellations and unpaid amounts.
Profit & loss	Two views. **Money in vs money out:** what you earned (sales without GST) minus everything you spent = profit. **Profit using recipe food cost:** net sales minus food cost from recipes minus other expenses (rent, salary, gas…). Plus a chart of where the money went. GST is never counted as your profit.

IMPORTANT
Food cost and profit are only correct when items have recipes. If less than 90% of sales are from items with recipes, the page shows a warning. Add the missing recipes in Inventory.

TIP
Sales on this page exclude cancelled orders. 'Sales' is the full bill amount including GST.

Dashboard

The Dashboard is today's quick view: sales, orders, average bill, open orders, sales by hour, last 14 days, top sellers, collections, order mix and low stock. A comparison with yesterday is shown in green (up) or red (down). A **This month so far** box shows what you earned, what you spent and your profit.

15. Franchise (owner and head office)

Outlets

Franchise → **Outlets** compares all outlets for the last 30 days: sales, orders, average bill, expenses and royalty receivable. A chart shows each outlet's share of total sales.

Adding a new outlet

1. Tap **+ Add outlet** (or Settings → + New outlet).
2. Fill in name, a short code, address, GSTIN, UPI ID and timings.
3. In **Franchise terms** tick 'This is a franchise outlet', type the franchisee's name and the **royalty %**.
4. Tap **Create outlet**. Four tables and the ingredient list are created for you. Then add the outlet's staff.

The master menu, recipes and coupons are shared by every outlet. Each outlet manager can only set a local price or mark items sold out.

Royalty statements

Choose a month. For every franchise outlet you see orders, sales, GST removed, **net sales** and the **royalty = net sales × royalty %**. Tap **Print** to give it to the franchisee.

Franchise leads

People who fill the franchise form on your website appear here automatically. Each lead moves across columns: **New** → **Contacted** → **Meeting** → **Agreement** → **Won / Lost**. Use the drop-down on a card to move it, tap the name to add notes, and use the phone and WhatsApp icons to contact them. You can also add a lead by hand.

16. Insights: smart help

Open **Insights** (owner, head office and franchisee). It reads your own data and tells you what to do in simple words.

- **Alerts:** sales up or down compared with last week, high discounts, too many cancellations, food cost, guest rating, best and slowest weekday, regulars who stopped coming.
- **Morning prep planner:** what to expect tomorrow (average of the same weekday in the last 4 weeks), turned into ingredient quantities, and whether you have enough stock. A red □ means you are short.
- **Running out soon:** how many days each ingredient will last at your current use.
- **Bought together:** items that are often ordered together. Use them for combos and to remind cashiers to suggest an add-on.
- **Menu engineering:** every item is sorted into **Stars** (popular and profitable: promote), **Workhorses** (popular, low margin: adjust price), **Hidden gems** (profitable, not ordered much: promote), **Reconsider** (neither: rework or remove).

Ask your business (AI assistant)

Type a question in plain English, such as 'Which day should I run an offer?' or 'How can I reduce food cost?'. The answer uses your last 30 days of numbers. Customer names and phone numbers are never sent. This feature needs an Anthropic API key to be added by whoever installed the system; if it is not added you will see a message saying so, and the rest of Insights still works.

17. Settings (owner and head office)

Outlet and billing

- Outlet name, code, address and phone (printed on the bill).
- **GSTIN** and **FSSAI** number. **UPI ID** (to show the payment QR).
- Opening and closing time, delivery radius and delivery charges.
- **Charge GST on bills** on or off. **Menu prices include GST**: on means GST is shown inside the price; off means it is added on top.
- Bill footer message. Loyalty points on or off and the earning percentage.
- Franchise terms (royalty %, franchisee name, active or not).

Tables

Add tables with a name (T9), section and seats. Disable a table to hide it. Tap **QR** beside a table to print its ordering QR code: stick it on the table so guests can order from their phones.

Online ordering

Shows the links to share: the ordering page, the table QR format, the feedback page and the franchise enquiry connection for your website.

Audit log

A list of important actions: cancellations, refunds, price changes, loyalty adjustments, staff changes, shift closings and deletions, with who did it and when. Check it if something looks wrong.

18. Quick answers and troubleshooting

Problem	What to do
I cannot sign in	Check the mobile number and use PIN (staff) or the Password tab (managers/owners). After 5 wrong tries wait 5 minutes. Ask your manager to reset your PIN.
An item is missing in the POS	It may be marked **Sold out** (Menu page) or **inactive**. Check the Menu.
'That table already has an open order'	The table is in use. Tap the table to open its running order, or finish and pay it first.
It says discounts above 10% need a manager	That is the cashier limit. Ask a manager to apply it.

Problem	What to do
I cannot cancel an item	After the kitchen has it, only a manager can cancel. Ask them.
Price on the bill is different from the menu price	Your outlet may have a **local price**. Check the Menu page (look for the 'local' tag).
Online order is not showing	Open the Orders page and wait a few seconds; it refreshes by itself. Check your internet. Also confirm it was not already accepted or rejected.
Kitchen screen has no sound	Tap anywhere on the page once and make sure the speaker button is on.
Print looks wrong	Choose the 80 mm thermal printer, margins None, scale 100%.
Stock is negative	Recipes used more than you recorded. Do a stock **Count** and record purchases on time.
Food cost looks too low	Many items have no recipe yet. Add recipes in Inventory → Recipes.
The page looks stuck or old	Refresh the page. If the internet is down, billing cannot work (see below).

Good to know

- **Internet is required.** This version cannot bill without internet. Keep a mobile hotspot as backup.
- **Payments are recorded, not verified.** Always confirm UPI/card in your own app.
- **GST:** the default rates are 5% on food and 18% on packaged water and cold drinks, with prices including GST. Ask your CA to confirm the rates and bill format before using it officially.
- **Printing** uses the normal browser print window.
- **WhatsApp:** the system opens each chat with the message ready; you press send. It does not send in bulk by itself.
- **Privacy:** customer phone numbers are stored. Message only people who agreed.

Quick reference card
